

Introducing a bold new initiative.

The Rural Firefighter Training Unit

As a founding sponsor of the Rural Firefighting Institute, Pro Safe has worked closely with the executive staff at RFI to fill the training needs of the rural firefighter.

It became apparent that a mobile training unit was needed that suited the unique logistics and restrictions of rural departments today. Using information received from organizers and firefighters faced with these challenges, Pro Safe has designed a mobile trainer that includes all the features of our full scale MTU to meet NFPA training objectives while keeping it within rural budgets & logistics capabilities.

The result has been the 24' Gooseneck Mobile Trainer.

This smaller version of the standard Pro Safe MTU has maintained many of the features at a fraction of the size. Some of the features include:

PLC controlled propane fuelled control system with 2 fireplaces

Fully integrated propane & temperature safety sensors

Twin 100# standard propane cylinder design for easy & quick filling

Stainless steel lined flashover area & stainless heat shield for movable pan

Moveable fireplace design with 2 interior locations and exterior use capability

Flashover/ Rollover capability

Reconfigurable walls for confined space & search & rescue training

Residential staircase to second floor for basement entry training evolutions

Roof hatch for tripod recovery & confined space training

4' X 8' fold up staging platform at rear doors.

3 points of entry/ egress; 2- man-doors and 1- 2'6" X 3' window

Side window & roof hatch provide hydraulic ventilation training capabilities

Artificial smoke generator for confined space & reduced visibility training

2 5/16" Gooseneck trailer design can be towed with a standard 1 Ton Dually truck.

Modular capability. The entire training unit can be removed from the trailer for temporary or permanent ground use.

All aluminum staircases & handrails for corrosion resistance.

The introduction of this mobile trainer will open up the training possibilities for rural departments with budget constraints, and transportation restrictions.

Pro Safe is proud to be associated with the Rural Firefighting Institute and actively involved in custom designing a training unit to suit their needs.
